

World Top 100 Companies by Market Capitalisation

GitHub portfolio preview | Dashboard updated with Market Cap vs Profit Margin relationship | 31 August 2026

Relationship result: Pearson $r = 0.282$ | R-squared = 8.0% | Weak positive relationship | 95 matched companies

Relationship between market capitalisation and profit margin

The relationship is calculated on the **same World Top 100 market-cap companies**, using current TTM operating profit margin where the source provides a numeric value. Five companies without a current numeric margin are excluded rather than assigned an estimate.

Matched companies	Pearson correlation (r)	R-squared	Result
95	0.282	8.0%	Weak positive relationship

Finding: Pearson $r = 0.282$, indicating a weak positive linear relationship. R-squared = 8.0%, so market capitalisation alone accounts for only about 8.0% of the observed variation in operating margin in this matched sample. Bigger companies are only slightly more likely to have higher operating margins, so company size is not a strong standalone predictor of profitability. Correlation does not imply causation.

Excluded: ICBC, PetroChina, International Holding Company, China Mobile and Prosus, because a current numeric TTM operating margin was not available from the market source.

Methodology and source notes

Market-cap universe: World Top 100 companies by market capitalisation, captured on 31 August 2026. Market capitalisation is a point-in-time measure and changes with share prices and shares outstanding.

Profitability measure: Operating profit margin on a trailing-twelve-month basis from CompaniesMarketCap company operating-margin pages. The workbook includes a row-level Operating Margin Source URL column.

Relationship method: Pearson correlation and a scatter plot compare market capitalisation and operating margin for identical company records. Only numeric matched observations are included ($n = 95$).

Annual/profile enrichment: Revenue, employee and company-profile fields use the latest company annual report or official investor-relations/company disclosure available in the project data where previous values were missing.

Budget: All companies remain marked 'Not publicly disclosed'. A standard comparable corporate budget is generally not published as one financial-statement line item.

Interpretation: The relationship is weak positive, not strong. Market capitalisation should not be treated as a proxy for operating profitability, and the observed association should not be interpreted as causal.

Primary sources

Market-cap ranking and operating-margin pages: <https://companiesmarketcap.com/>

Annual/company profile sources are recorded in the Excel workbook under Annual Data Source.

Operating-margin source URLs are recorded row by row in the Excel workbook under Operating Margin Source URL.

GitHub use: upload both the Excel workbook and this PDF. The PDF gives recruiters a quick preview of the dashboard, the market-cap/profitability relationship and the complete dataset, while the workbook remains the interactive analysis deliverable.
